Art Unit: 1793

1. The disclosure is objected to because of the following informalities: The spacing of the lines of the specification is such as to make reading difficult. New application papers with lines 1½ or double spaced on good quality paper are required.
2. Applicant is requested to provide in the specification headings, such as “background of the invention”, “summary of the invention”, “brief description of the drawings”, “detailed description of the drawings”, to render the specification in a better format.
3. Claims 1-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Those claims are written in a narrative format rather than an objective format and thereby they do not positively and directly include all the process steps or structural elements which are referred thereto. Further, in claims 7 and 8, it is not clear with respect to what the lifting speed is 10% faster or 10 times slower. In claims 9-20, they are improper apparatus claims depend from a method claim since they can be infringed without infringing the base claim from which they depend. In claim 10, line 3, and claim 18, line 5, the meaning of "at least one is located in a lower area equalling the casting gap" is not clear. In claim 17, it recites that "the upper circular guides each comprise a guide surface directed against the relevant outside edge of the side seal". However, the guide surface is against the guide roll, rather than outside edge of the side seal (see figure 8). In claim 20, line 6, the meaning of “in a force closure” is not clear.

Art Unit: 1793

4. Claims 1-20 contain allowable subject matter and will be allowed upon the objection to the specification and the rejection to the claims supra are overcome.
